

Why don't you process your change document directly on the screen!

Anyone who has tried to enter information from a completed change document in printed form into CADIM, axalant or Eigner PLM, will know what I am talking about: Several menus and screens have to be called up until all the data has been transferred from the document into the system. The design of the document often follows different requirements and rules to the design used for the realisation of the PLM system. This does not only apply to the data input but also to the output.

ChangeAdministration developed by **usb** offers a remedy to this problem. It gives you the opportunity to work interactively on your change document online. According to the principle "What you see is what you get" (WYSIWYG) the change document is shown 1:1 on the screen.

The user benefits from the resulting advantages:

- No longer does one have to worry about which menu button in CADIM, axalant or Eigner PLM to click in order to select a function for the data input/output.
- The straightforward instructions simplify the data input/output for new users or those who do not regularly work with the system.
- A modern web-oriented user interface, even if you are still working with CADIM.
- Complete integration into the Eigner PLM-system environment. Thus there is a guarantee of data quality and access control.
- The change document is available in electronic form wherever you need it.

Does your change document look like this ?

It could look like this on the screen in CADIM, axalant or Eigner PLM.

How *usb* will support you

- a) You show us what your change document looks like at the moment in printed form and what you would like to use on the screen in the future.
- b) We will present you with our draft for the document/s as an online version for your PLM system, be it CADIM, axalant or Eigner PLM.
- c) On the basis of this draft we will then jointly define the rules, tests etc. which are relevant for the processing of the change document/s online.
- d) Afterwards we will develop a change document according to your individual needs and requirements as an online form. We will then keep to a binding plan of deadlines and costs (fixed price).

And how much will it cost?

Our aim is to offer this application at a reasonable price. On the other hand it is understandably difficult to operate with a lump sum, considering the many different layouts for the document. We have therefore decided to use the process described below. The customer will first be issued a draft document and then we will decide on how to proceed further.

The prices in detail:

- licence: € 600,- per concurrent user
- draft: € 2.500,- per page of document
- implementation according to c) and d): You will receive a fixed price offer

Technical requirements

- Oracle 8+
- a Web-Server(Apache, IIS etc.) installed on Windows NT/2000 or UNIX or SOLARIS or LINUX
- End user desktop with Internet Explorer or Netscape
