

usb – expertise in PLM and Configuration Management

For more than 40 years, we have been engaged in the field of product data management for the industries aerospace, defense, automotive, transport and telecommunication. As a subsidiary of Philotech and part of the Bertrandt Group, topics such as digitalization, IoT, Digital Twin and Digital Thread are firmly integrated into our core competencies. Our wide range of services includes engineering and IT services with a focus on consulting, support and process optimization in the product lifecycle. In configuration management, we are recognized as one of the leading companies in Europe.

We are currently seeking the following to strengthen our team:

Configuration Manager (m/f/d)

in the field of aerospace and automotive engineering.

Responsibilities of your new position will include:

- Participation in both internal and external project teams
- Providing documentation to internal and external stakeholders
- Monitoring/reporting of project status and dissemination to relevant organizational units
- Monitoring/control of the development results (documentation, software, etc.)
- Planning and implementation of configuration management
- Leading of documentation management
- Collection of development results from various departments within a certain time frame and combining these results into a build standard which is made available to the customers as well as archiving within the configuration management system
- Continuous improvement

Your skills/requirements:

- Technical degree, with at least technician (mechanical engineering, electrical engineering, aerospace, computer science)
- Team- and strong communication skills
- Organizational talent
- Competent, professional and representative appearance
- Good knowledge and understanding of both written and spoken German and English

The job description of a configuration manager has not yet been defined as an occupation, but we are confident that you have the right qualifications for this job based on your technical training.

Our offer:

usb stands for flat hierarchies, open communication, acting on one's own initiative and an appreciative working atmosphere. We offer a flextime regulation, remote working and 30 vacation days to enhance your work-life balance. In diverse and demanding projects, you can contribute to the development of future-oriented technologies and rise to new challenges. In addition, a comprehensive range of further training courses will be available to you in our Academy.

We look forward to getting to know you and joining forces to implement your career plans !
